

# Are the upper cable trays in the computer room for power cables

## Overview

Cable trays are a support system for electrical cables, power, signal, and communication and optical fiber cables. NEC section 300-8 does not permit any tube, pipe, or equal for water, air gas, drainage, steam, or any service other than electrical in raceways or cable trays containing. All cables should be supported in cable tray that is run overhead, above the equipment or under the raised floor. This paper addresses the routing of cable pathway beneath a raised floor to maintain optimal efficiency. Client did a facility in the UK with a bus duct under floor, plug-in pin and sleeve receptacles for power to each cabinet. Something doesn't seem right with. Whether you're setting up a data center or you're an organization housing live IT equipment on your own premises, one crucial decision looms: how to organize your computer room cabling (an organization's on-prem server room is what we shall call their computer room).
