Recoat your fiber after. Fiber pigtails are simple in appearance, yet essential in function. Most importantly, its insertion loss is below 0. For example, Application: R&D, Factory, Outdoor. A fiber pigtail is a short length of optical fiber that comes with a high-quality, factory-polished connector already installed on one end, leaving a length of exposed glass on the other. Instead of building a connector from scratch in the field, you simply fuse the “bare” end of the pigtail to. HU-125 Fiber Pigtail is a good tool fir the measurement of the characteristic of fiber. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a.
