

CT represents which type of cable tray

Overview

The CT cable tray is continuously perforated, and made from 1 piece of material. It provides a solution for installers who are looking for an economical support option, only require a shallow cable laying depth or need a low profile system, but still from a product that maintains excellent load. Explore various cable tray types and sizes for electrical installations. Each cable tray type performs a different function and comes in various materials such as aluminum. What Are the Main Types of Cable Trays?

Cable trays are typically classified by structural design, which directly affects ventilation, load capacity, and cable support. From an engineering standpoint, most installations fall into one of the following categories: Each type is not “better” or “worse”. CT cable trays are available in different heights and designs, from premium to basic. We have several vertical models. Discover our different solutions and don't hesitate to contact us if you have any questions. Applications: Power plants and substations, Heavy.

Article Content

What are the main types of cable tray?

Introduce the main types of cable tray including ladder cable tray, perforated cable tray, solid bottom cable tray and wire mesh cable tray.

CT Cable Tray Fittings Guide

The document provides specifications for CT perforated cable trays and fasteners, including dimensions, weights, and ordering codes for various widths. It also

The Difference between the CT and ET range of Cable Trays

Another option for cable trays is the EzyTray range: Trays such as the ET, ET3, and ET5 are examples of laddertray type cable trays because of the ladder rung type nature of their construction. These
