

# Cable tray through-wall reserved opening

## Overview

Vertical penetrations are weathertight openings where pipes, ducts, cable trays and any other building ancillaries enter or exit a building through a wall. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with design requirements. Process flow: reserved openings → busway installation → distribution box positioning and installation →. The following charts give the number of 3M pillows needed to completely firestop an opening that cable tray passes through. UL Listed Systems Concrete Wall - C-AJ-4056 3 HR F-Rating, 3/4 HR T-Rating Gypsum. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Non-curing and re-usable firestop block designed for the easy re-penetration of retrofitted cables. Self-adhesive discs of firestop putty designed to firestop single cables and small cable bundles.
