

# Can power cables run across fiber optic cable poles

## Overview

There are no interference problems with fiber optic cables and power cables. Fiber uses light for data transmission. The last mile of Fiber to the Home (FTTH) and Fiber to the Cabinet (FTTC) aerial fiber deployments often run through crowded environments, where space is at a premium. Street lights, existing telephone poles, power lines, street signs, buildings and trees all jostle for position, especially in. The local cable company ran fiber in the small town nearby recently, about 1 mile away from us. We currently get internet via cable company's coax via a neighbor. For monitoring and managing networks, they use a variety of means of communications, including running fiber optic cables along the transmission and distribution towers, radio links and contracting landline and cellular communications services from telecom carriers. by Jeanna Deese and Chris Rivas Power over Ethernet—it may be an old concept, but new applications continue to be identified that are redefining. It is known that the data cable is not advisable to share the same conduit/trench with the power cable to avoid any unnecessary data transmission interference.
