

## Article Content

### Upscaling of Carbon-Based Perovskite Solar Module

Here, we want to present the upscaling routes of carbon-counter-electrode-based module devices in terms of materials formulation, architectures,

### Carbon-Based Nanocomposites for Photonic Devices

Carbon-based nanocomposites have emerged as versatile and promising class of materials for next-generation devices due to their unique optical, electrical, and mechanical properties. This chapter

### Carbon Electrodes for Perovskite Photovoltaics: Interfacial Properties ...

Carbon electrodes have gained significant attention as a cost-effective, sustainable, stable, and scalable replacement for metal electrodes in perovskite solar cells (PSCs). However, traditional carbon

### What's New Inside a 100G ZR Module? EFFECT Photonics

Discover the latest advancements in 100G ZR modules learning about smaller tunable lasers, efficient DSPs, and industrial temperatures.

### Carbon-Based Nanocomposites for Photonic Devices

This chapter provides a comprehensive overview of the synthesis and integration of carbon-based derivatives tailored for photonic applications. Emphasis is placed on the tunable and optical

### Carbon-based materials for future photonics devices. A parallel

This paper gives a brief overview on the recent advances on photonic devices based on carbon materials such as: graphene waveguides or photonic devices on paper or plastic substrates

### Upscaling of Carbon-Based Perovskite Solar Module

Carbon-based perovskite solar cells (C-PSCs) and modules use graphite/carbon-black-based material as the counter electrode. The formulation

Let us help

A multi-channel transmit/receive optical subsystem is all on-chip, making Carbon the most sensitive, compact LiDAR system available. A wide variety of operating modes let you customize field of view,

### Carbon-Based Optics and Photonics

Carbon nanomaterials, i.e., single-wall carbon nano-tubes (SWCNTs) and graphene, attract much attention due to novel electronic, photonic, and mechanical properties that can find application in a

## Silicon Photonics Market Size & Share Analysis

Silicon Photonics Market Analysis by Mordor Intelligence The silicon photonics market size is projected to expand from USD 2.83 billion in 2025 and

Optical properties of amorphous carbons and their applications and ...

Amorphous carbon exhibits a wide variety of optical properties and, thus, offers substantial opportunities for various applications in photonics. The main optical properties, which should be

## AI Data Center Optical Transceiver Module Market 2025–2030

The AI data center optical transceiver market has entered a historic growth phase, driven by the exponential expansion of AI computing clusters and the accelerated migration from traditional copper

(PDF) Quantum Semiconductors Based on Carbon

The Design and synthesis of highly pure materials such as Graphene, Carbon Nanotubes, fullerenes, and other Carbon-based allotropes were shown.

Roadmapping the next generation of silicon photonics

In order to complete the transition to the era of large-scale integration, silicon photonics will have to overcome several challenges. Here, the authors

Carbon Electrodes for Perovskite Photovoltaics: Interfacial Properties ...

We examine recent efforts to improve energetic alignment at the perovskite-carbon interface, including modifications of the carbon-electrode work function and the use of interfacial layers bridging the

Integrating silicon photonics with complementary metal-oxide ...

Complementary metal-oxide-semiconductor-integrated silicon photonics offers a practical path forward by combining high-volume manufacturing with mature photonic building blocks.

Terahertz photonics and optoelectronics of carbon-based nanosystems

The existing and continuously growing THz technologies demand compact, fast, broadband sources/detectors, and other high-performance devices. In this article, we provide an

3D-printed, carbon-based, lossy photonic crystals: Is high electrical ...

Glassy carbon-based monoliths are indeed rigid and cannot be reversibly deformed, whereas the cells and windows sizes responsible for the resonance position would be modulated in

Photonic Waveguide Circuit Integrated with Carbon Nanotube Single ...

Single-walled carbon nanotubes (CNTs), with their unique excitonic properties and chemical tunability, are attractive candidates, but their integration into photonic circuits remains

Carbon-based nanostructures for emerging

In this review, we highlight the state-of-the-art of carbon-based nanomaterials used in emerging photocatalytic applications such as the CO<sub>2</sub>

Photonic Integrated Circuits (PICs)

Photonic Integrated Circuits (PICs) Unsere flexible Post-CMOS Photonik-Plattform unterstützt ein breites Spektrum an Wellenlängen und

Vapour-assisted surface treatment for highly stable fully printed ...

A vapour post-treatment strategy enables fully printed carbon-electrode perovskite solar modules with an area of about 50 cm<sup>2</sup> and a certified power conversion efficiency of 19.26%.

Voyant Photonics Launches Carbon FMCW LiDAR Sensor

Voyant Photonics has introduced the Carbon FMCW LiDAR sensor, featuring an effective and affordable LiDAR on a chip with solid state beam

Voyant Photonics Launches CARBON FMCW LiDAR

Carbon's highly integrated silicon photonic chip is fingernail-sized and provides high-resolution, millimetre precision, object detection and static/dynamic

Regulating three-layer full carbon electrodes to enhance

The device efficiency of carbon-based perovskite solar cells remains unsatisfactory. Here, the authors design a triple-layer full-carbon electrode with

## Contact Us
