

Color Standard for Temporary Distribution Boxes

Overview

For three-phase four-wire systems used in distribution boxes, the standard wire colors must be followed: Phase A - Yellow, Phase B - Green, Phase C - Red, Neutral wire - Light Blue, Protective Earth wire - Yellow/Green bi-color. The IEC 60446 standard, “Basic and Safety Principles for Man-Machine Interface, Marking, and Identification,” establishes global guidelines for identifying electrical equipment terminals, conductors, and wiring colors. These devices are used throughout the world and we deliver products that are made in accordance with the temporary power. The use of Yellow/Green bi-color wire for any other purpose is. The Occupational Safety and Health Administration (OSHA) and the American National Standards Institute (ANSI) developed a standardized system in which each color designates a specific hazard. This visual approach enables employees to remain vigilant about potential risks, ensuring a safe and. work requires electrical power for many purposes. However, exposure to weather, frequent relocation, rough use and other conditions not normally encountered with conventional wiring systems necessitate special consideration not require in other applications or in completed structures.
