

Cost of building communication towers

Overview

The cost to build a cell tower varies significantly based on location, tower type, height, and specific site requirements. Dgtl Infra provides an overview of the components of building a cell tower, details the cost in multiple geographic regions, and differentiates between monopole, lattice, guyed, stealth, and rooftop structures, while referencing data points from independent tower companies. In other regions, the average costs are lower: \$135,000. Whether you're a telecom operator, a public safety agency or a defense contractor, knowing how much it costs to install a cell tower can help you plan and budget appropriately. Telecom towers, which are structures that carry antennas and other devices, are necessary to transmit cellular signals and provide a network. The average cost to build a cell tower is about \$175,000, but the cell tower lease can add \$600,000 to \$1 million or more in value to the property. There are some disadvantages from cell tower leases for some property owners.
