

Distance for adding fiber optic cables to power poles

Overview

Fiber optic cable on overhead poles should be U-shaped expansion bend every 3-5 poles. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. You should pull on the fiber cable strength members only! Never exceed the maximum pulling load rating. On long runs, use proper lubricants and make sure they are compatible with the cable jacket. FO-VC2 JOINT USE - VERTICAL MIDSPAN CLEARANCES 48. Obviously, these fiber cables need to be resistant to electricity, which can be difficult as many aerial cables contain high tensile steel (HTS) for tensile strength. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed.
