

# Do gigabit optical modules come in different sizes and shapes

## Overview

Select the appropriate form factor: Optical modules come in various form factors such as SFP (Small Form-factor Pluggable), SFP+, QSFP (Quad Small Form-factor Pluggable), QSFP28, etc. Choose the form factor that fits your networking devices and infrastructure. Optical modules are available in various types to meet diversified requirements. The higher transmission rate an optical module provides, the more complex structure it. There are many types and specifications of optical modules, including 1×9, GBIC, SFF, XENPAK, SFP, SFP+, XFP, SFP28, QSFP, QSFP28, QSFP-DD, OSFP, etc. These modules are typically installed in Optical Line Terminals (OLTs) at the service provider's central office and Optical Network Units (ONUs) or Optical Network. Different optical modules support different transmission distances and data rates. There are many models of gigabit optical modules.
