

Does replacing the optical module require remelting

Overview

When replacing an optical module, you do not need to swap boards. Huawei is not liable for any problem caused by the use of non-certified optical or. They can be easily removed from the hardened component and provide the advantage of using a higher laser output power during the hardening process (a higher share of the beam is absorbed). If the process is carried out at higher outputs, the material melts and solidifies afterwards rapidly – this. This document focuses on projection optical modules that incorporate Texas Instruments' DLP Display chips and are designed to project an image onto a surface for a variety of applications, including smartphones, tablets, display projectors, smart home displays, digital signage, AR glasses, and. Optical modules are hot swappable, and you do not need to power off the device when replacing optical modules. Optical modules are electrostatic-sensitive components.
