

Does the reserved optical cable need to be laid in a sleeve

Overview

If two cable ends are to be connected with a sleeve, this must take place immediately and with protection against moisture and rain. Outdoor cables are affected by huge differences in temperature and high bending and pulling forces while they are being laid. The thicker the cable the stronger it may appear. The following pages aim to. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. 110 in remote areas with lack of usual infrastructure for installation including the procedures of cable-route planning, cable selection, cable-installation scheme selection. Fiber optic cables have Kevlar aramid yarn or a fiberglass rod as their strength member. On long runs, use proper lubricants and make sure they are compatible with the cable jacket. The information contained in this manual should serve as a guide to proper. **WARNING:** To minimize hazards to yourself and others in or near the work area, follow all company rules for setting up barricades, ladders, scaffolding, and warning signs.
