

Exposed ground wire in home electrical panel

Overview

Exposing grounding wire inside electrical panels, junction boxes, or behind equipment is normal and safe. But running bare ground wire in livable spaces without protective conduit or insulation is often a safety hazard and may break electrical codes. The electrical grounding system is a fundamental safety mechanism in residential wiring, designed to protect people and property from electrical faults. The ground wire's purpose is to provide a low-resistance path for fault current to travel safely back to the source, triggering the circuit. Exposed ground wires require immediate attention and potential remediation. If you've been wondering, “Can ground wire be exposed?

” or “Is it safe for a grounding wire to be visible?

” this post will clear up your. Grounding is not optional — it's required by the National Electrical Code (NEC) and is one of the most important safety systems in any home or building.
