

External connection of Huijue PoE switch

Overview

Standard connection: Use one Ethernet cable, with one end plugged into the LAN port of the router and the other end plugged into any regular data port of the PoE switch (non Uplink port, some switches have dedicated Uplink ports for cascading, not used here). A PoE switch is a network switch that utilizes PoE technology to transmit power and data over the same Ethernet cable to powered devices such as IP cameras, wireless access points, and VoIP phones, simplifying installation and reducing maintenance costs. This eliminates the need for separate power cables and allows for flexible placement of network devices in locations where power outlets may be limited or absent. The splitter is the silver and black box in. The correct connection between PoE switches and routers is a key step in building a stable and efficient network. In this situation we take advantage of the Ethernet.
