

Fiber Optic Switch Compatibility Test

Overview

Optics Selector provides an end-to-end view of two network devices (switches, routers, NICs) connected by Cisco optics and cables. This tool combines the current Compatibility Matrix and Interoperability Matrix. Disclaimer: Cisco makes the data in this tool available for. In modern fiber-optic networks, SFP modules (Small Form-factor Pluggable transceivers) are widely used to connect switches, routers, and servers to fiber or copper cabling. These compact, hot-pluggable optical transceivers allow network engineers to flexibly select different transmission media. Suitable for testing the adaptability between transceivers and different brands of switches. You can choose demo test for remote experience, or test report to get. This guide helps network engineers and field techs verify module support, DOM behavior, optics parameters, and fiber link budgets before committing hardware.
