

Fiber optic adapters are known in the industry as

Overview

A fiber-optic adapter — sometimes called a coupler or bulkhead coupler — is a passive mechanical interface that mates and aligns two terminated optical fibers (i., two fiber connectors) such that light can reliably pass from one to the other with minimal insertion loss and maximum return loss. Fiber optic adapters are small but essential components that ensure precise alignment between connectors. Using the wrong type or neglecting cleaning can lead to signal loss and unstable connections. In this guide, we'll explore what fiber optic adapters are, their main types, how to choose the. Also known as fiber adapter, optical fiber adapter, fiber coupler, fiber optic coupler, mating sleeve, or simply adapter, this component is ubiquitous in every fiber network — from FTTH drop terminations to hyperscale data center interconnects and 800G/1.
