

Fiber optic router has signal but no internet connection

Overview

Restarting your router, checking your modem connection, and resetting network settings often resolve the problem quickly. A quick restart of your router and modem can often re-establish the. If your router shows it's connected but you can't access the internet, don't panic—this is a common issue with simple fixes. Sometimes, updating your router's firmware or. This connected but no internet error means your device has successfully authenticated with your router and received an IP address, but it cannot reach anything beyond your local network. The problem affects Windows PCs, Macs, iPhones, Android phones, and every other WiFi device equally. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. Take a moment to check the following: Examine the LAN cable connections: Make sure that one end of the LAN cable is securely plugged into the WAN port of your router, while the other end is. Check your Fibre box (ONT) Lights: The lights on the Fibre (ONT) box provide crucial information about the connection status. This step helps diagnose if the issue is closer to your.
