

Galvanized steel wire for optical cable

Overview

The galvanized steel strands for optical fiber cables are made of high-quality carbon steel wire rods through a series of processes such as heat treatment, peeling, water washing, pickling, water washing, solvent treatment, drying, hot-dip galvanizing . The galvanized steel strands for optical fiber cables are made of high-quality carbon steel wire rods through a series of processes such as heat treatment, peeling, water washing, pickling, water washing, solvent treatment, drying, hot-dip galvanizing . Our telecom wire, including steel messenger wire, meets the strict specifications set by ASTM International, a global leader in establishing material standards to ensure consistent performance. These standards outline the ideal characteristics and testing methods for various materials, including. The galvanized steel used for fiber optic cables has two main functions: one is to improve the strength of fiber optic cables (in the production and use of fiber optic cables, steel can provide additional strength, so that the fiber optic cables will not break during traction or construction). The galvanized steel wire strand is used for overhead ground lines or electrical power transmission lines. These include operating features, materials used, and the environments where they are intended to be installed.
