

German power distribution box design standards

Overview

The standard DIN EN 60670-1, VDE 0606-1 applies to boxes, enclosures and parts of enclosures for electrical installation equipment with a rated voltage not exceeding 1000 V AC and 1500 V DC intended for domestic and similar fixed electrical installations indoors or outdoors. German standard power systems are the backbone of safe, efficient and legally compliant industrial operations in Germany. For plant owners, planners and EPC partners, understanding how VDE and DIN norms interact with real-world factory design is crucial to avoid downtime, liability and unnecessary. The guide lists the process of design, assembly and documentation of a low-voltage switchgear assembly in the order of the necessary steps and at the same time assigns to these steps the relevant sections from the standard IEC 61439 / EN 61439. The search for an assignment-compliant, dependable solution should fulfill those usual requirements placed on cost optimization, efficiency, and time needs.
