

Gyfty non-metallic optical cable Adss optical cable

Overview

In the realm of non-metallic optical cables, two popular options have emerged, namely ADSS (All-Dielectric Self-Supporting) cable and GYFTY (Gel-Filled Loose Tube cable, Non-Metallic Strength Member). Although both serve the purpose of enabling high-speed data transmission, these cable variants. The structure of GYFTY63 optical fiber cable 250 μ m fiber is positioned in a loose tube made of high modulus material, and the loose tube is filled with waterproof compound. The center of the cable core is a metallic Fiber Reinforced Plastic (FRP), for some cores fiber cable, a layer of polyethylene. GYFTY fiber optic cable is a non-metallic cable used for power transmission system, excessive thunder areas and high electromagnetic interface. The cable tubes, which are filled with filling compound, are stranded around the FRP strength member.
