

Horizontal to Vertical Conversion of Mesh Cable Tray

Overview

A vertical inside bend is a fitting used to change the direction of a cable tray system vertically, typically at a 90-degree angle, directing cables inward. Depending on the type and version of mesh cable tray, as well as the corrosion protection used, the mesh cable tray systems can be ambient temperatures of - 20 °C to + 120 °C. Whether routing Cat 6 cables in a tight riser space or keeping power lines off the floor in a suspended ceiling, these cable support systems offer flexible. Elbow joint RVS is pushed inside the cable tray and attached with the included screw set. Need more information?

The cable tray helix fittings from Thomas & Betts (T&B) ease transitions between horizontal and vertical cable tray runs, especially in confined areas and near walls. The Ladder Tray features light, rugged, tubular steel construction. Enables installation close to walls and other surfaces, eliminating need for dance. Provides enhanced cable protection in confined spaces. Secures cables within fitting for clean, organized cable.
