

How many ports are needed for the main switch of the distribution box

Overview

Number of ports: Usually 24 or 48 Reason: To ensure data integrity by shielding against electrical noise. Purpose: For high-speed fiber optic networks; They house connections and facilitate cable management. Technical Specifications: Connector type: LC, SC, ST, MPO/MTP There are many types of switches that vary based on the number of ports they offer, port speeds, and other additional features such as Quality of Service (QoS), Power over Ethernet (PoE), or Layer 3 routing capabilities. Knowing the differences between them and understanding the purpose of each. I am thinking to buy FortiSwitch 148F 48 ports for distribution switch. Do you recommend 24 ports with same or near switching capacity like Fortiswitch 124F 24 ports?

Hello, Thank you for question. You need to consider how many ports. Port Density: The port density is the number of ports on the access switches. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. Practice good wiring: secure grounding, neat cable management, proper insulation, and correct wire gauge and breaker. What are the functions and uses of DB Boxes?
