

How many supports should be installed on each layer of the cable tray

Overview

Cable tray support quantity can be calculated using a simple formula: Support Quantity = Total Length ÷ Support Spacing + 1 $20 \div 2 + 1 = 11$ supports In a typical project, a 20-meter cable tray with 2-meter spacing requires 11 supports. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. For proper installation, design, and maintenance, adherence to international standards is essential. For licensed electricians, mastering these principles is essential. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. If cable tray installation is to contain three 4/0 multiconductor cables (1. 85") and two 350 kcmil multiconductor cables (2. Cable tray supports are components used to fix and support.
