This comprehensive guide explores every aspect of the fiber optic PLC splitter in 2026: its definition and working principle, historical evolution, detailed construction and manufacturing process, exhaustive classification of types and configurations (with emphasis on 1×2 PLC. A PLC Splitter (Planar Lightwave Circuit Splitter) is a passive optical device used to divide a single optical signal into multiple outputs with uniform optical power. It plays a vital role in FTTH (Fiber to the Home) and PON (Passive Optical Network) applications, enabling one input fiber to be. A PLC Splitter takes one optical signal and splits it into many outputs. This helps share signals in fiber optic networks. Pick the split ratio that matches what you need. Choose the connector type like SC, LC, or FC. A recent report from MarketsandMarkets predicts that the PLC splitter. In simple terms, a Planar Lightwave Circuit (PLC) splitter is a device that splits a single fiber optic signal into multiple signals.
