

# How to add a router with a dedicated IP address to a fiber optic connection

## Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for. For fiber, your router needs the right WAN connection, speed support, and Wi-Fi capabilities. Your router must have a Gigabit Ethernet WAN port to connect to the ONT. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. Open a web browser and enter 192. Check the information about the VLAN ID from the ISP. After correctly. This wikiHow article will show you how to connect a new router to an existing network. The process can seem overwhelming at first, but we've. To use your own router with AT&T's BGW320-505 gateway, you simply plug it into one of the yellow 1Gb ethernet ports on the back of the device.
