

How to bridge fiberglass cable trays

Overview

Bolted couplers are used to connect lengths and fittings together, all couplers use M10 Flange nuts/bolts. Fabrication with fiberglass is relatively easy and comparable to working with wood. Ordinary hand tools may be used in most cases. Too much force can rapidly dull tools and also produce excessive heat which softens the bonding resin in the. A fiberglass cable tray, also called an FRP cable tray or cable bridge in some regions, is a structural support system used to route and protect electrical and instrumentation cables. The selection of material and finish is a function of the environment in which it is used in a wide range of environments, and easily formable (Appendices II and III). Aluminum's exceptional corrosion resistance, particularly. The correct installation of cable ladders and cable trays is important to help maximize the safe working load as defined by our published load tables and to minimize deflection.
