

How to connect fiber optic cable conveyor belts

Overview

The sensing cable is attached to the conveyor belt by use of various fixing methods. The FireFiber range of cables are designed to give maximum protection to the fiber optic while maintaining a thermal conduction, which can enable the system to react very quickly. Fiber optic sensing technology uses the principle of light reflection to detect changes in the physical properties of the conveyor belt, such as strain, temperature. The Yokogawa DTSX1 Fiber Optic Heat Detector is an advanced, all-in-one solution designed for precise and rapid heat detection over extensive areas. Using Distributed Temperature Sensing (DTS) technology, it monitors temperature variations along fiber optic cables, enabling early identification of. Early Warning of Overheating: Luna's fiber optic sensing provides early detection of hotspots or overheating along the conveyor belt. Precise Temperature Profiling: Engineers can obtain detailed.
