Overview

Storage temperature range is specified in the relevant cable specification. The cables marked as indoor cables must be stored only in the covered areas protected against UV radiation with a maximum relative humidity of 60 %. This document does not replace the relevant rules or general or specific standards and regulations, the document contains the recommendation for the handling with the optical cables and its storage. The information applies to all types of the optical cables. Before storing an optical fiber, it is important to transport or move it correctly because many optical fibers are heavy. Keep Cable Connectors Clean and Dry Before using fiber optic cables, clean the connectors on the cable and on the cables or ports the. Following the right storage practices is essential to keep your fiber optic cables in top condition and maintain their efficiency.
