

# How to read the model number of a fiber optic connector

## Overview

To identify a fiber optic connector, you can often refer to the TIA 568 color code, which provides specific colors for connector bodies and boots: Beige is typically used for multimode fiber connectors. The text on the cable starts with the Corning product name "Corning Rocket Ribbon (TM) Optical Cable," date of manufacture "01/2022" and a serial number. The phone handset graphic denotes this as a telecom cable. Here is the most important information: 864F means the cable contains 864 fibers<sup>SM</sup>. A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch panels, by bridging the gap between their. Most fiber optic connectors are plug type that aligns the fibers for mating along with some type of locking mechanism such as bayonet, screw-on or snap-in. This listing can help distinguish between the various types of data connectors you may encounter when working with data and communication. Let's take a look at the meanings of the fiber optic cable models. Green is often associated with singlemode.
