

How to secure cable trays with reverse fasteners

Overview

Always use 2 splice plates per length of tray and SBH and CNH splice nuts and bolts to fasten them in place. EzyStrut splice bolts have a smooth head which should be installed on the inside of the tray's side wall. The SBH's smooth head is specially designed so it cannot. This guide covers how to select heavy-duty materials, use vibration-damping accessories, and implement locking hardware to ensure your system meets safety standards and avoids costly downtime. 1 Can I use wire mesh trays in high-vibration areas?

6. 3 Does. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resil- for each of these installation challeng-ience and safety. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Connecting cable trays correctly is essential for system safety, load stability, and long-term performance. The ET 'EzyTray', ET3 and ET5 are designed to work how you want to work around your project.
