

# How to sleeve the fiber optic cable splice pad

## Overview

Slide shrink sleeve over exposed fiber and place in splicer's heating compartment; sleeve should cover each side roughly 3cm from joint. Slide shrink tube over shrunk sleeve; the shrink tube must leave no inner jacket exposed. After two fibers are precisely fused using a fusion splicer, the splice is fragile and needs protection from physical stress, moisture, dust, and other. There are 7 procedures to perform in the splicing process; roughly in the following order: Procedures 2 and 3 will be performed twice; once for each of the two cables. A spliced bare fiber is very fragile. more How to correctly install the splice. The operation and skills of fiber optic fusion splicing technology can be mainly divided into five steps: fiber stripping, fiber cutting, fiber melting, fiber sleeve, and fiber winding.
