

How to wire a 400A meter in a distribution box

Overview

In this video, we walk you through the full installation of a 400amp meter base, including two 200amp disconnects and a 200amp subpanel. Whether you're building a house, upgrading your electrical service, or prepping your shop, this detailed tutorial covers everything you need to. To ensure proper functionality and safety when installing a high-capacity service panel, it's essential to correctly connect the power feed lines and ground wires. Begin by verifying that the incoming power supply matches the specifications required for heavy-duty service. The neutral bus bar. For 400amp service, we can use standard AWG wire values. Use thick Kcmil copper and aluminum wires. It means wire must have about 400A ampacity. Currently, there is an aluminum over-head wire which connects from the pole to a separate meter box which houses the meter outside, it has a ground. The key to a successful installation lies in the proper setup of the distribution panel, ensuring it can manage the increased energy flow without risk.
