

Installation of cable trays for underground wells

Overview

Tray cables can be buried underground, but only if they are specifically designed and rated for direct burial. This section will guide you through the necessary steps to ensure a successful installation. It will cover how to maintain spacing or to keep cables in place when the tray is bent, and how to determine the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require it. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. Below is the detailed cable tray installation method statement not only for cable tray but also applicable for GI ladder and trunking for indoor and outdoor applications and in service rooms like pump rooms, electrical rooms and plant rooms etc. But before you lay the first tray or clamp down a single cable, you need a solid plan.
