

# Installation of the light-controlled power supply module

## Overview

This guide describes installing Processor Panels and running low-voltage type Class 2 / PELV wiring, such as the Control Station Device (CSD), Power Panel, User Interface, and Interprocessor Links. See instructions included with all Power Panels for running line (mains). Use this guide to successfully install a GRAFIK7000, GRAFIK6000, or GRAFIK5000 lighting control system. The LCM can be mounted in any orientation to cable trays, walls and direct to a ceiling slab. All cables should be independently secured with appropriate fixing straps in accordance with local electrical regulations. Incoming mains, data and input cables should be installed. Need. Do NOT connect DALI or mains power to RS-485 DyNet data terminals. The recommended connection method is to 'daisy chain' devices in. This new range of intelligent marshalling boxes and accessories offers a simple and easily configured system with all the components necessary to distribute power, detector inputs and switch commands to the connected luminaires. The range includes a series of programmable Lighting Control Modules. LED lighting is increasingly replacing legacy light sources (mercury vapor, metal halide and sodium vapor) in outdoor applicatio...
