

# Is it okay to connect a square-head fiber optic cable to a router

## Overview

It is a 'standard' single-mode fiber cable with an SC-APC connector at the end. You can't 'really' connect it directly to a random consumer router in most cases - it's meant to go into an optical fibre device. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). The reason I ask, is that the customer service rep for Zply says that I will not need to purchase a modem and that the router I linked them: link will be able to be hooked up straight to the fiber they are installing. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider.
