

Is it the IP address of the fiber optic router

Overview

Enter the default IP address, often 192. Check your router's manual if unsure. Login credentials are typically set to admin for username and password for password, unless you changed them during setup or the manufacturer specifies. In the networking world, a default gateway is an IP address that traffic gets sent to when it's bound for a destination outside the current network. On most home and small business networks — where you have a single router and several connected devices — the router's private IP address is the. Fortunately, finding your router's IP address on any computer, phone, or tablet is easy. Android: Open WiFi Analyzer and go to ☰ > Access points > your router. iPhone: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled "ONT" or "Fiber"). To do an errand outside, you must first pass via the exterior. Then, access the router's admin panel through a browser, usually by entering an IP address like 192.
