

Main Distribution Box Protection Measures

Overview

In the Technical Specification for Lightning Protection of Building Electronic Information Systems (GB 50343-2012), 5. 3 requires that: For AC power supply lines entering buildings, at the junction of LPZ0A or LPZ0B and LPZ1 areas such as the main distribution box of the line . Surge protection in main power distributions Incorrectly installed surge protection poses a liability risk for planners and installers of switching devices. Connecting cables that are too long often lead to problems. Find out about correct installation and how to comply with the required cable. Surge protectors (Surge Protective Devices, SPD) installed in distribution board panels are primarily used to protect electrical equipment from transient voltages (surges or spikes) caused by lightning strikes, power grid fluctuations, or other factors. They serve as the first line of defense against voltage spikes, ensuring all circuits are shielded.
