

Malaysia PAM4 Optical Module

Overview

MACOM delivers industry widest portfolio of chip-sets for 100Gbps (4x28Gbps) optical modules. Typical reach of these applications is up to 300m for short reach. The Marvell® PAM4 optical DSP portfolio, including Spica™ and Nova™ DSPs, addresses the critical the need for high-bandwidth optical interconnects to power AI infrastructure. Marvell leads the pluggable module ecosystem with low-power, high-performance silicon for AI, cloud, enterprise and 5G. connects for data communications applications. The high bandwidth module supports 400G Ethernet and InfiniBand connections over s” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated. PAM4 is a branch of the pulse amplitude modulation (PAM) technology, which is a mainstream signal transmission technology following non-return-to-zero (NRZ). Figure 1-1 shows the typical waveform. The Broadcom® BCM87840 is the industry's highest-performance and lowest-power single-chip 400GbE PAM-4 PHY transceiver capable of driving four lanes of 106-Gb/s PAM-4 at 53 Gbaud, while supporting DR4, FR4, LR4, and QSFP112 optical links. The BCM87840 leverages Broadcom's market-leading 7-nm PAM-4. The Malaysia PAM4 DSP Market, valued at 13. 84 Bn in 2025, is projected to grow at a CAGR of 8.
