

# Monaco CFP8 Low Loss

## Overview

The CFP8-LR8 module utilizes eight optical wavelengths through coarse wavelength division multiplexing (CWDM). Each wavelength carries 50 Gb/s PAM4 signal. Advanced, high-power femtosecond lasers for superior edge quality in micromachining and improvements in scientific applications like three-photon microscopy. 24/7 production line lasers delivering game-changing results in mobile device manufacturing, laser glass cutting, OLED display processing. Against this backdrop, we have developed a new optical receiver module for 400GBASE-FR8/LR8 CFP8. 56. This article breaks down the key differences between CFP, CFP2, CFP4, and CFP8 optical transceivers commonly used in fiber optic networks. The essential techniques to implement 400GE, such as pulse amplitude modulation (PAM4), forward error correction (FEC) and a continuous time-domain linear equalizer (CTLE), are discussed.
