

Optical Module 1550 Self-operated

Overview

The Optilab SWL-1550-MC laser source module unit provides fast continuous wavelength sweeping, driven by an electrical ramp voltage input, and contains a fast tunable laser source with control electronics. The ORION 's packaging was designed with the customer's need in mind: highly integrated, small form factor and self-contained module. External. The ORION™ devices are compact laser modules employing the RIO high-performance External Cavity Laser (ECL). This laser (PLANEX™) and consists of a gain chip and a planar lightwave circuit including waveguides with Bragg gratings, forming a laser cavity with significant advantages. Specifically designed for FBG fiber sensor interrogation applications, the versatile. In modern fiber-optical networks, a 1550nm optical transceiver plays a vital role by converting electrical data into invisible light, sending it across single-mode fibers over long distances, and then restoring it back into electrical form. Mouser offers inventory, pricing, & datasheets for Singlemode 1550 nm Fiber Optic Transmitters, Receivers, Transceivers.
