## Overview

The underground fibre optic cable (UGFO) shall be unarmoured metal free with double HDPE sheath wet core (Type-I). This non-Nylon, metal free Optical fibre cable shall be suitable for underground installation in pipes/ducts. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Placing cables underground has the added benefits of reducing transmission losses, aiding planning consent and reduced risk of service supply loss through extreme weather. When this document was at the stage of zer draft, its legal framework had the nature of regulations. Project success depends on careful planning, precise installation practices, and proper. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth.
