

Photovoltaic Metering Combiner Box

Overview

DC Combiner Boxes for photovoltaic systems The DC Combiner Box collects and distributes the string currents from the solar panels. ABB offers a plug & play solution that accommodates overcurrent protection devices, disconnectors and surge protective. Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems. This simplifies the connection to the inverter, which converts DC power to alternating current (AC) for use in homes and businesses. It provides critical protection functions including overcurrent protection, surge protection, and circuit isolation, ensuring the safety and efficiency. Modern solar power stations—from residential rooftops to 1500V industrial arrays—depend heavily on high-quality electrical enclosures, advanced protection components, and intelligent data systems to maintain long-term reliability. This guide explains how combiner boxes work, how they have evolved.
