

Plastic Port Module

Overview

Plastic (polyoxymethylene) port systems are very light and they offer the advantage of minimal artefact formation using diagnostic methods such as magnetic resonance imaging. Does not contain latex, phthalates or PVC. Not all products are available in every country. Please refer to the respective country websites: For all other countries please use the contact form to enquire about availability for your country. All rights reserved Each port array module allows the Bpod state machine (r0. 7 or newer) to interface with 4 additional behavior ports. The injections are less painful and the implanted port allows the patient to lead a normal day life. The Streamline series has traditionally been a family of low-profile plastic and steel wallplates designed for applications requiring minimum labeling and port designation. All Streamline Wallplates are available in one. Siemon LC to MTP® and SC to MTP Plug and Play modules provide a quick and efficient way to deploy up to 24 LC or 12 SC fibres in a single module.
