

# PoE serial connection to a switch

## Overview

In a daisy-chain topology, PoE switches are connected in series, one after another. A PoE switch is a network switch that utilizes PoE technology to transmit power and data over the same Ethernet cable to powered devices such as IP cameras, wireless access points, and VoIP phones, simplifying installation and reducing maintenance costs. By eliminating the need for separate power, a powered device can receive redundant power when it is connected to a PoE switch port and to an AC power source. Each device is represented by a. One of the biggest advantages of copper twisted pair Ethernet cable (also called Category cable) is its ability to perform two critical functions at the same time: When these functions are simultaneously performed, it is known as PoE or Power over Ethernet. A single cable is used to do it, which.
