

# Power outage at European distribution box

## Overview

On Monday, 28 April 2025, at 12:33 CEST (11:33 WEST; 10:33 UTC), a major power blackout occurred across the Iberian Peninsula affecting mainland Portugal and peninsular Spain, where electric power was interrupted for about ten hours in most of the Peninsula and longer in some. On Monday, 28 April 2025, at 12:33 CEST (11:33 WEST; 10:33 UTC), a major power blackout occurred across the Iberian Peninsula affecting mainland Portugal and peninsular Spain, where electric power was interrupted for about ten hours in most of the Peninsula and longer in some. The final report of the Expert Panel on the 28 April 2025 blackout in continental Spain and Portugal identifies the causes of the blackout and outlines recommendations to strengthen the resilience of Europe's interconnected electricity system. The power cut. In most cases, blackouts happen when several risks overlap, such as extreme weather, high electricity demand, aging infrastructure, grid faults, power plant outages, fuel supply pressure, or cross-border transmission problems. Energy stocks play an important role in reducing the risk of shortages. A nationwide power outage hit Spain and Portugal on Monday, leaving millions without electricity. Authorities in Madrid and Lisbon as well as operators are all scrambling to understand what exactly happened – Newsweek has broken down what we know. On Monday, April 28, Spain and Portugal experienced what both the authorities in both European countries have described as nationwide electricity outages, though at press time, there is no explanation for the incident. Madrid's Barajas and Lisbon's Humberto Delgado airports have, reportedly, been.
