

# Relay protection connection piece is used for

## Overview

Its main purpose is to safeguard electrical equipment like transformers, generators, and transmission lines from damage due to abnormal conditions such as overloads, short circuits, or voltage imbalances. Protective relays and devices have been developed over 100 years ago to provide “lastline” of defense for the electrical systems. Types of Protective Relays: Protective relays are categorized by their mechanism (electromagnetic, static, mechanical) and function. Electrical protection relay has two type protecton as HT panel protection and LT panel protection. HT panel is used for distribution of 11 KV / 33 KV power supply. The HT power supply is received from GO switch and distributed to the. A protective relay is an intelligent electrical device designed to detect faults in power systems and initiate corrective actions such as tripping a circuit breaker. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor. This handbook covers the code of practice in protection circuitry including standard lead and device numbers, mode of connections at terminal strips, colour codes in multicore cables, dos and donts in execution.
