

Slovenian power distribution box standard parts

Overview

Main components include enclosure, electrical mounting parts, electrical components, cables, connecting terminals, and label. Electrical components are vertically mounted. Enclosure is made of cold-rolled or stainless sheet steel with a thickness ranging from 1.5 mm to 2.0 mm. Slovenia power strips and PDU power distribution units for surface mount, rack mount and general purpose applications. With a professional approach, know-how and advanced technology, ELES has been providing safe, reliable and uninterrupted electric power transmission throughout Slovenia and across the borders. Product includes distribution board, lighting control panel, metering panel, and power cabinet. In designing the distribution board and power cabinet, ABB drew upon its wealth of experience with low-voltage switchgear and. Available are TTA (type-tested assembly) switchboards, manufactured according to an adopted type or system with no changes and PTTA (partially type-tested assembly) switchboards, which include partially type-tested parts, with the latter derived from standard parts and suitably tested. Slovenia's high-voltage transmission network consists of three different voltage levels: 400 kV, 220 kV and 110 kV. It is intended to transmit electric.
