

Standard requirements for maintenance spacing of distribution boxes

Overview

UL508A contains two important requirements to consider when applying power distribution blocks. Spacing of 1" through air, 2" over surface (at 600V) is required when used in a feeder circuit (that's everything ahead of or on the line side of the final branch circuit overcurrent. Working space: The front clearance, side clearance, and height clearance requirements for electrical equipment that provide a safe area for maintenance, inspections, and other work. Dedicated space: The space equal to the width and depth of electrical equipment in addition to the space extending. Sufficient access and working space shall be provided and maintained about all electric equipment to permit ready and safe operation and maintenance of such equipment. Design requirements help you follow important standards like. JECT TO UPDATE AND MODIFICATION AT ANY TIME. PRINTED COPIES MAY NOT INCLUDE THE MOST UP-TO DATE STANDARDS, REFERENCES, OR REQUIREMENTS. TO EVERY CIRCUMSTANCE OR ELECTRICAL SYSTEM. SRP ENCOURAGES EACH USER TO CONSULT WITH ITS OWN TECHNICAL ADVISOR CONCERNING THE APPLICABILITY OF THESE TANDARDS TO. The requirements of Rules 2-308 and 2-310 are particular to certain types of equipment (i. equipment with or without draw-out parts). To assist in application, the following table, Table B1 summarizes the application of each rule. Some of the requirements and ratings include: voltage, continuous current, wire range (load and line side).
