

Switch cabinet branch busbars

Overview

Switchgear busbars deliver power from the external feeders to all the branch overcurrent protection circuits that are contained within the installation. Switchgear busbar are used in splitters, panel boards, switchgear, switchboards, and numerous electrical enclosures and cabinets. We look forward to hearing from you! Flexible and solid busbars made of copper, aluminum or CoppAl® serve as the central distribution board in your switchgear. Using EHRT technology enables Flexitech to consistently manufacture high quality and repetitive solutions. We have an experienced and dedicated team. In most assemblies you will find horizontal main bars, vertical risers, neutral and equipment-ground buses, and purpose-designed. Busway systems offer a flexible, compact, and efficient method for distributing power in industrial and commercial areas. CanBrass is a design and costing tool for Canalis busbar trunking runs. The Stud Terminals are used in control cabinet construction and in the area of drive motors as connection terminals for high rated currents of up to 240 mm².
