

# Terminal Access Switch Verification

Various specifications optional

## Overview

This guide provides a comprehensive overview of commands to check switch health, interface status, VLAN configurations, MAC address tables, port security, and spanning tree protocol (STP). This chapter describes how to configure the Terminal Access Controller Access Control System Plus (TACACS+) protocol on Cisco NX-OS devices. It is a Cisco proprietary AAA protocol. For RADIUS and TACACS+, an SmartFabric OS10 switch acts as a client and sends. A Network Authentication Protocol is a security mechanism implemented at the network access layer. TACACS+ uses a TACACS+ server profile to. This document provides typical configuration examples for interoperation between Huawei switches and mainstream IP phones, firewalls, routers, Microsoft NLB servers, multi-NIC servers, Cisco switches, and SolarWinds.
